Symptom:	Engine stalls while idling. Unable to restart. Or smoke occurs and in the worst case, a fire may result. 		
Causes:	Sealant was adhered to connector area because abnormal amount of sealant had been injected to leaned parts in dry process at supplier. Sealant at connector area became softer when current applied and created excessive gap created. Abnormal heat was created by increased contact resistance due to excessive		
Countermeasure:	Following countermeasures were applied at supplier's production line; <ol style="list-style-type: none"> 1. Exposure time changed in injection process of sealant 2. Disposed leaned parts in dry process 3. Microscope Inspection added in inspection process 4. Height of pallet extended in dry process
